

Abstract of the Disclosure

A building block having the dual capabilities of transferring the genetic information e.g. by recognising an encoding element and transferring a functional entity to a recipient reactive group is disclosed. The building block can be designed with an adjustable transferability taking into account the components of the building block. The building block may be used in the generation of a single complex or libraries of different complexes, wherein the complex comprises an encoded molecule linked to an encoding element. Libraries of complexes are useful in the quest for pharmaceutically active compounds.
